

## **Embryologist**

Are you passionate about animal agriculture and excited to work with cutting-edge reproductive technologies? We're seeking an Embryologist to join our team and play a vital role in advancing sheep and goat breeding programs.

### **About the Role**

Working alongside our veterinarians, you'll be instrumental in the success of our small ruminant breeding programs. This hands-on position focuses on embryo collections, grading, and transfers, while also contributing to our expansion into in vitro fertilization (IVF). This position reports to the Breeding Services Team Lead.

### **What You'll Do**

- Search, grade, and prepare small ruminant embryos for transfer into recipient females
- Maintain excellent laboratory technique and adhere to established protocols
- Assist veterinarians with laparoscopic artificial insemination (LAI) and other procedures
- Learn and perform oocyte searching and grading for IVF maturation
- Maintain accurate records and perform data entry
- Support quality control initiatives and ensure lab cleanliness
- Provide animal care for in-house donor and recipient programs as needed
- Assist the Frozen Genetics team with male collections, freezing, and processing
- Uphold RSG's policies, procedures, and professional standards

### **What We're Looking For**

- Passion for animal agriculture and small ruminant reproduction
- Strong attention to detail and commitment to precision
- Ability to thrive in a fast-paced, dynamic environment
- Excellent teamwork and communication skills
- Dedication to maintaining professional standards that reflect our industry leadership

If you're ready to contribute to innovative breeding programs and grow your expertise in reproductive technologies, we'd love to hear from you.
